

Write all the prime numbers between:

- 1 20 and 30
- 2 30 and 40
- 3 70 and 80
- 4 90 and 100

Are there the same number of prime numbers between each multiple of 10?

Find all the pairs of factors for:

- | | |
|------|-------|
| 5 27 | 8 64 |
| 6 36 | 9 72 |
| 7 45 | 10 51 |

True or false?

- 11 All prime numbers have exactly two factors.
- 12 All prime numbers are odd numbers.
- 13 1 is not a prime number.
- 14 Every 2-digit multiple of 6 is next to a prime number.
- 15 Every 2-digit prime number is next to a multiple of 6.

13 and 31 are both prime numbers.
How many other pairs of prime numbers with reversed digits can you find?
