

Perform these multiplications.

1 $57.38 \text{ m} \times 24 = \square$

8 $38.42 \times 39 = \square$

2 $17.43 \text{ m} \times 28 = \square$

9 $78.47 \times 36 = \square$

3 $46.37 \text{ m} \times 26 = \square$

10 $59.47 \times 33 = \square$

4 $\text{£}75.22 \times 32 = \square$

11 $39.53 \times 37 = \square$

5 $\text{£}69.37 \times 34 = \square$

12 $55.55 \times 28 = \square$

6 $\text{£}35.27 \times 29 = \square$

13 $37.73 \times 37 = \square$

7 $11.13 \times 38 = \square$

14 $89.47 \times 45 = \square$

Is it true that if the number of pence in the amount being multiplied is even, then no matter what you multiply it by, the answer will always have an even number of pence?
